PRACTICA DE SCRAPPING

Elaborado:

Ing. David Vilatuña

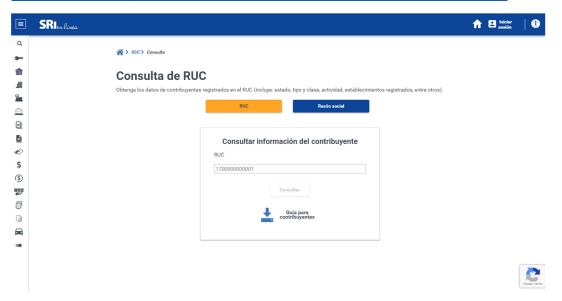

Objetivo:

En la presente practica se elabora establece como parámetros la búsqueda automatizada en un sitio web de criterios para que el programa se enlace y entregue, datos a telegram en bot, subir información mongodb

Análisis:

Se busca en que pagina podemos realizar la automatización y tenemos la siguiente:

https://srienlinea.sri.gob.ec/sri-en-linea/SriRucWeb/ConsultaRuc/Consultas/consultaRuc

El funcionamiento de la misma requiere se ingrese los datos de un RUC comercial y esta nos entrega la información de la empresa.

En algunos momentos el sitio pide el reCAPTCHA

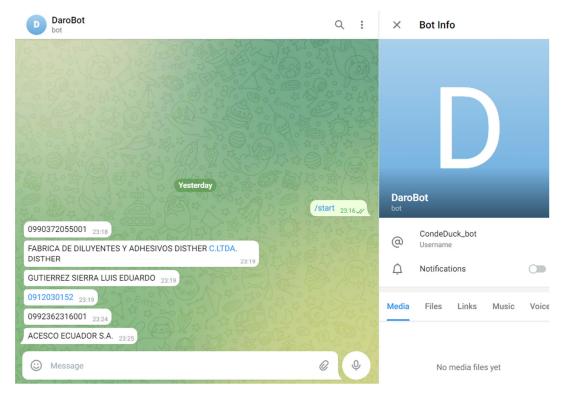

Del resultado obtenemos

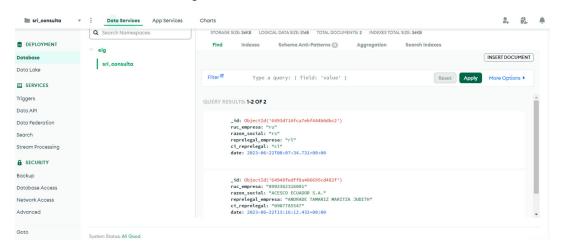

Esta información, es lo que realiza la entrega el sitio web, como manejo en segundo plano por parte del curso vamos a ingresar estos valores resultantes en el bot y guardarlo en la base de datos mongodb.

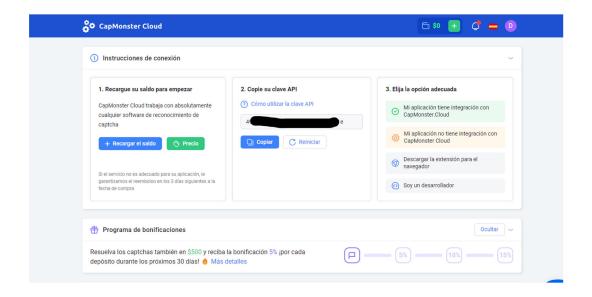

Información enviada a Telegram

Y la información enviada a MongoDb

Anexo a ello para poder saltar la seguridad de recaptcha, se ha realizado la consulta y se ha obtenido los siguientes recursos.

Recurso visual:

https://www.youtube.com/watch?v=-TMNh64ubyM

Recurso de codificación:

https://gist.github.com/alperensert

En el modulo main.py, se encuentra toda la codificación confirmada, el problema que tenemos es que es pago y no se tiene saldo en la cuenta.

CONFIGURACION DE UN NUEVO BOT.

1. Ingresamos en Telegram

6. CondeDuck_bot 22:27.// es el nombre ingresado.

7. Nos genera el mensaje:

Done! Congratulations on your new bot. You will find it at t.me/CondeDuck_bot. You can now add a description, about section and profile picture for your bot, see /help for a list of commands. By the way, when you've finished creating your cool bot, ping our Bot Support if you want a better username for it. Just make sure the bot is fully operational before you do this.

Use this token to access the HTTP API:

For a description of the Bot API, see this page: https://core.telegram.org/bots/api

22:27

- 8. De este mensaje necesitamos el token lo copiamos y lo pegamos en el archivo de referencias a varialbles globales que no se suben a git .env
- 9. Se requiere para el uso de bot la identificacion de nuestro usuario en telegram de la

siguiente manera.

10. Nos vamos al siguiente chat:

- 11. Presionamos INICIO
- 12. Nos genera el ID del usuario este id es unico asi se cambie de nombre:

```
"update_id": 830338538,
"message": {
    "message_id": 2277987,
    "from": {
        "id": 58 7,
        "last_name": "Daro",
        "last_name": "Vilas",
        "username": "condeDK",
        "language_code": "en"
},
```

14. Estos datos se requieren para el desarrollo del programa

CONFIGURACION DE MONGODB

- 1. Ingresamos a https://account.mongodb.com/account/login?signedOut=true
- 2. Nos logueamos con Google o git

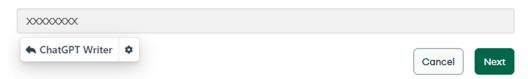

- 4. Creamos un nuevo proyecto,
- 5. Nombre del proyecto

Name Your Project

Project names have to be unique within the organization (and other restrictions).

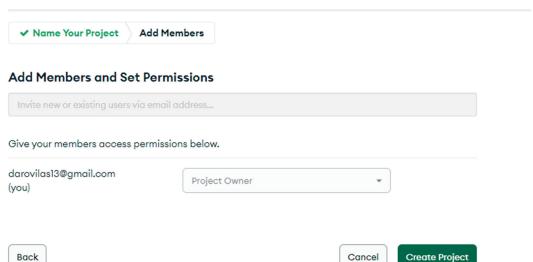

New Project

6. En el caso de ingresar mas usuario al proyecto

DARO'S ORG - 2023-06-10 > PROJECTS

Create a Project

7. Creamos la base de datos.

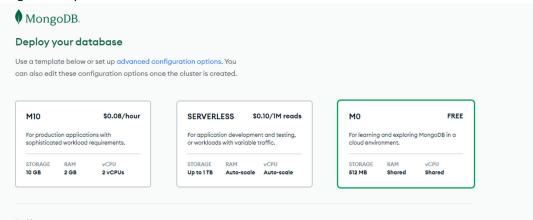

Create a database

Choose your cloud provider, region, and specs.

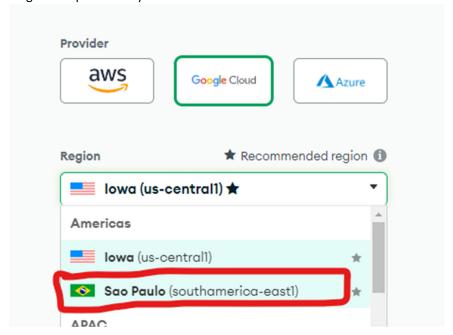

Build a Database

Once your database is up and running, live migrate an existing MongoDB database into Atlas with our Live Migration Service.

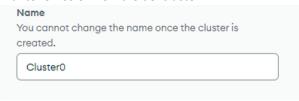

8. Elegimos la opcion free

9. Elegimos el proveedor y el datacenter mas cercano

10. Mantenemos en nombre del cluster

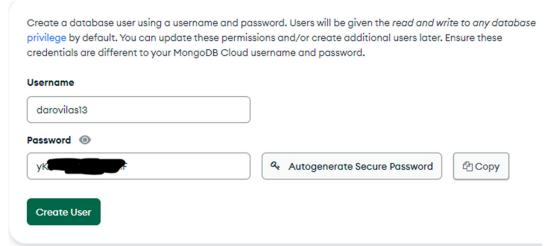

- 11. Elegimos la seguridad
 - How would you like to authenticate your connection?

 Your first user will have permission to read and write any data in your project.

 Username and Password

 Certificate
- 12. Creamos el usario es importante tener en cuenta que el password es la unica vez que se presentara por lo cual se debe grabar

13. Añadimos, las ips que tengan acceso a esta base de datos.

En este caso ponemos que todo el mindo tenga acceso a nuestra base de datos.

14. Con ello creamos la base de datos

15. Con esas opciones nos entregan las formas de conectarnos ver el monitor y mirar las colecciones que serian los datos
